

Sprint 4 Planning

Team: Dipto Thursday 10:30 Group 8

Sprint: Sprint 4

Date: 28/9/21

Scrum Master: Kartik Kumar (S3788894)

Development team: Aaron Fisher (S3840619), Oliver Hale (S3781403), Shrestha Ghosh (S3805530).

Sprint Overview

Sprint Goal: *To add higher level functionality. Adding functionality which after reviewing notes of the MVP and adding features which are complex but will make the User experience better.*

Sprint Duration: 2 Weeks

Sprint Capacity: *The team can complete all documentation and design within the given time and work for an estimate of 50 hours in 2 weeks with given experience in development, documentation, and design.*

Special Circumstances: N/A

Team vision for the sprint

In planning for this sprint our team added the following items to our sprint backlog to complete within the allocated 2-week period:

Item: Adding ability to Review

Explanation: The User/Customer should be able to add review to a particular book which they like or have purchased. The review should display just after the book's description

Estimated Story points: 8

Why: Having other people review the books first will give a new user a sense of trust and satisfaction on the book which they are looking to purchase

Item: Admin can access logs of Users and Books transaction

Explanation: Administrator should be able to access logs of every action which has taken place in the portal. The logs should be downloadable and available when needed

Estimated Story points: 5

Why: Giving admins the feature to access logs will give administrator more ease on governing the platform seamlessly

Item: Implementing book condition feature

Explanation: Shop owners should be able to specify the condition of the book they are

selling. Users/Customers should be able to view the condition of the book they are buying.

Estimated Story points: 5

Why: Giving shop owners the ability to justify the condition of the book they are selling will build trust between the seller and the consumer.

Item: Administrator are able to accept/reject roles on the portal

Explanation: Administrator should be given a particular space inside their dashboard where they can review incoming role requests. The role requests are users looking for roles inside the portal like shop owners.

Estimated Story points: 8

Why: To block unauthorized and malicious users from polluting the website with any sort of harmful content which can break the trust between the consumer and the portal.
