

List of added User Stories

The Bookero team made it our absolute priority that we get the User Stories right the first time. As we started development we came across different use cases for our product and after careful discussion with the Product Owner we decided to add these User Stories and the reason is justified with them as well.

- *As a customer I want to be able to read the description of a particular book before purchasing it*

Giving the User the ability to read the description of the book they are purchasing will help the customer make decisions in a more efficient manner. This User Story was missed in the initial planning but the use case we came across with it was pretty interesting. In the future we plan to implement Machine Learning to see how much time the customer spends reading these description and then learn if that user actually buys the book or not.

- *As a customer I want to be able to see other reviews on a book so I can know what other people think of it before I buy it*

Giving the Users the ability to decide on other customer's recommendation. This User Story was missed in the initial planning.

- *As an Administrator I want to be able to review incoming role requests so I can update user roles on the site*

To prevent any malicious activity inside the portal implementing a system so that only admins can approve accounts which are valid or not.
